

Introducing **AQUALINK's** **Polyurethane Tube Thimbles**

- The Ultimate Replacement for Steel Thimbles

Durable and lightweight

The thimbles are extremely durable and lightweight, making them ideal for use in maritime environments.

Long lifespan

With polyurethane as the main material, the tube thimbles have a significantly longer lifespan compared to traditional steel thimbles.

Extensive testing

The thimbles have undergone thorough testing over a long period, both in the sea and on land, showing no visible signs of damage or wear. This ensures reliability and long-lasting performance.

Unique color for each size

Each thimble size can in a unique color, allowing for easy identification of rope dimensions underwater.

Optimal fit with pear link

AQUALINK's tube thimbles can be combined with their pear link for a perfect fit and increased functionality.

Reduces environmental impact

Polyurethane is an environmentally friendly material that helps reduce negative impacts on the environment.

Versatile use

The thimbles are suitable for various applications, including aquaculture, marinas, fishing boats, and other maritime industries.

With AQUALINK's polyurethane tube thimbles, you get a reliable and durable solution that surpasses traditional steel thimbles. Whether it's in aquaculture, marinas, fishing vessels, or other maritime industries, this product offers outstanding longevity, low weight, and trouble-free performance in saltwater environments. Choose polyurethane and experience the future of thimbles!

NS-9415:2021 certified:

AQUALINK's polyurethane tube thimbles meet all the requirements of the NS-9415:2021 standard, ensuring high quality and reliability.
